Hiring | Automotive Engineers - OEM | Pune
We're supporting a leading automotive OEM in Pune to onboard 2 strong engineers (2–3 years' experience) to be a part of their Connected Vehicles / Telematics team on a contract role.
This is a hands-on, onsite opportunity—working directly with vehicles, ECUs, TCUs, and real field data. If you like practical engineering over slide decks, read on
Role 1: Telematics Validation Engineer
You'll work on:
- Mobile network validation: Modem, SIM, Antenna
- AT commands, logs, and field installations
- Embedded system validation (MCU / MPU)
- Telematics & ECU field installation and validation
- TCU firmware validation and log extraction
- CAN / J1939, diagnostics (PGN, SPN, DBC), DTC debugging
- HW & SW issue analysis and resolution
Role 2: Embedded Engineer & Data Analyst
You'll work on:
- Embedded development & validation (Embedded C, Python)
V&V activities
- Data analysis using Excel, Power BI / Tableau, Python
- Manual & automated test scripts
- Validation reports
- Field issue analysis and TCU debugging
Location: Pune (Onsite)
Role Type: Contract

Experience: 2–3 years
If this sounds like you—or you know someone who fits—please DM your profiles or share it on
akshay@aombusiness.in

ALL INDIA QA JOBS
28-Jan-2026

We are looking for a highly skilled and experienced Senior QA Automation Engineer with strong expertise in Playwright and working knowledge of Salesforce. The ideal candidate will be responsible for designing and implementing robust automation frameworks, writing and maintaining end-to-end test scripts, and ensuring the overall quality of the application with a focus on Salesforce-based solutions.

Remote

Key Responsibilities:
- Design, develop, and maintain end-to-end UI automation frameworks using Playwright.
- Collaborate with development and QA teams to understand business requirements and create comprehensive automation test plans.
- Write reusable, scalable, and maintainable test scripts for web applications.
- Integrate automation scripts with CI/CD pipelines (e.g., Jenkins, GitHub Actions).
- Perform manual and automated testing for Salesforce-based applications.
- Identify, record, and track bugs, and ensure timely resolution.
- Participate in Agile/Scrum ceremonies and contribute to sprint planning and estimations.
- Generate detailed test reports and provide metrics on test coverage and quality.
- Continuously evaluate test tools and processes to improve efficiency and effectiveness.

Required Skills & Experience:
- 6- 9 years of total experience in QA with a strong focus on automation.
- 3+ years of hands-on experience with Playwright for web automation.
- Strong experience in test scripting using TypeScript/JavaScript.
- Working knowledge or experience in Salesforce testing (Sales Cloud, Service Cloud, or custom apps).
- Experience with REST/SOAP API testing.
- Familiarity with Salesforce tools like Workbench, Data Loader, or SOQL.
- Solid understanding of SDLC, STLC, and Agile methodologies.
- Experience in integrating test automation with CI/CD pipelines.
- Strong problem-solving and analytical skills.
- Excellent verbal and written communication skills.

Good to Have:
- Salesforce Admin or QA certification.
- Knowledge of other test automation tools like Selenium, Cypress, etc.
- Familiarity with test management tools like JIRA, TestRail, or Zephyr.
- Performance testing or mobile testing experience.

Please reach out to me at jbhatia@forcecraver.com

Experience: 7+ Years
Employment Type: W2 Only
Looking for someone who has experience in Salesforce QA
Work Mode: Remote
Any Visa Except OPT, CPT
We are looking for a Senior Salesforce QA Engineer with a strong focus on automation testing to support enterprise
Salesforce implementations. This role requires deep hands-on experience in building and maintaining automation
frameworks while also supporting critical manual testing activities.
Key Responsibilities
• Lead Salesforce test automation strategy and execution
• Design, develop, and maintain automated test frameworks for Salesforce UI and APIs
• Perform automated testing for Salesforce Lightning (LWC and Aura) applications

• Execute manual testing as needed, including functional, regression, and integration testing
• Validate Apex classes, triggers, workflows, flows, and Salesforce configurations
• Perform Salesforce API and integration testing (REST/SOAP)
• Integrate automated tests into CI/CD pipelines
• Conduct data validation and migration testing
• Collaborate with developers, product owners, and business analysts in Agile teams
• Track and manage defects using Jira or similar tools
• Support release cycles and post-production validation
Required Skills and Qualifications
• 7+ years of overall QA experience
• 5+ years of hands-on Salesforce QA experience
• Strong expertise in Salesforce automation testing
• Experience with automation tools such as Selenium, Provar, TestNG, JUnit
• Proficiency in Java or JavaScript for test automation
• Strong experience testing Salesforce Lightning Experience
• Hands-on experience with API testing tools like Postman or REST Assured
• Solid understanding of Salesforce data model and security model
• Experience working in Agile/Scrum environments
• Excellent analytical and communication skills
Nice to Have
• Salesforce certifications (Admin, App Builder, or related)
• Experience with CPQ, Field Service Lightning, or Experience Cloud
• Exposure to performance testing
If you are interested or know someone who might be a great fit, feel free to DM me or share your resume!

Sr. POS Software Engineer (Toshiba ACE / 4690)
Location: Remote
Duration: 12+ Months
Engagement: C2C
Visa: No H1B
LinkedIn Profile Required
We are looking for a Senior POS Software Engineer with deep hands-on experience in Toshiba ACE and Toshiba 4690 to support and enhance a large-scale retail point-of-sale ecosystem used across 2,300+ stores. This is a long-term, remote contract opportunity supporting mission-critical retail systems.
What You'll Be Working On
Building and enhancing enterprise-scale POS and self-checkout solutions
Developing store-facing and customer-facing UI screens, including Toshiba proprietary interfaces
Creating pin-pad and payment-related screens to support seamless checkout experiences
Designing and implementing POS integrations across retail platforms and backend systems
Writing, debugging, and optimizing high-quality, production-ready code
Supporting CI/CD pipelines by integrating automated test cases
Participating in full SDLC activities, from requirements to deployment
Estimating effort, defining work plans, and supporting production rollouts
Partnering with cross-functional teams to deliver reliable retail technology at scale
What We're Looking For
Mandatory experience with Toshiba ACE POS
Strong, hands-on experience with Toshiba 4690 OS
Proven background working in retail store systems / POS environments
Experience developing POS or self-checkout software

Comfort working with HTML-based and proprietary POS UI frameworks
Solid understanding of software design, coding standards, and debugging
Experience in Java is a strong plus
Familiarity with CI/CD, automated testing, and modern SDLC practices
Ability to work independently in a remote, contract-based environment

ServiceNow Test Architect
Dallas, TX – Remote
12+ months contract
reach me Chetan.mangla@tekgence.com
need minimum 15+ years of experience
Data Accuracy & Validation:
Design test approaches to validate data accuracy and completeness from source systems to ServiceNow CMDB.
Implement automated and manual validation techniques for large-scale data sets.
Performance Testing:
Create performance testing plans to evaluate ingestion speed, load capacity, and scheduling efficiency.
Recommend optimal ingestion schedules and batch sizes based on performance results.
Defect Prevention & Reduction:
Define strategies for identifying, categorizing, and reducing defects across projects.
Use data-driven analysis to pinpoint root causes and recommend process improvements.
ServiceNow ATF Integration:
Assess ATF capabilities and identify areas where automated tests can be effectively implemented.
Collaborate with ServiceNow developers to integrate ATF into the overall testing strategy.
Governance Compliance:
Ensure all development teams follow Data Ingestion Guidelines established by the Architecture Review Board and XMO team.
Monitor compliance and provide feedback or corrective actions when deviations occur.
Framework & Tooling:
Select and implement appropriate testing tools for data validation and performance testing.
Ensure frameworks support scalability and maintainability across multiple projects.
Test Documentation Standardization:
Establish the template for Test Plan Documents to be used consistently across all projects.
Define structure and content requirements for test plans, including objectives, scope, approach, and reporting.
Traceability Strategy:
Develop and implement a traceability approach linking requirements, user stories, and test cases.
Ensure traceability is maintained throughout the project lifecycle for compliance and audit readiness.
Manual vs Automated Testing Strategy:
Define the high-level strategy for determining when manual test cases are needed versus automated test cases.
Ensure a balanced approach that optimizes efficiency, coverage, and risk mitigation across projects.
User Acceptance Testing (UAT) Strategy:
Define the high-level approach for UAT, including scope, roles, responsibilities, and success criteria.
Collaborate with business stakeholders to ensure UAT aligns with requirements and project objectives.
KPI Definition & Reporting:
Define program-level KPIs to measure testing effectiveness, defect reduction, automation coverage, and overall quality.
